# Creating macOS Tahoe VM from Developer Beta

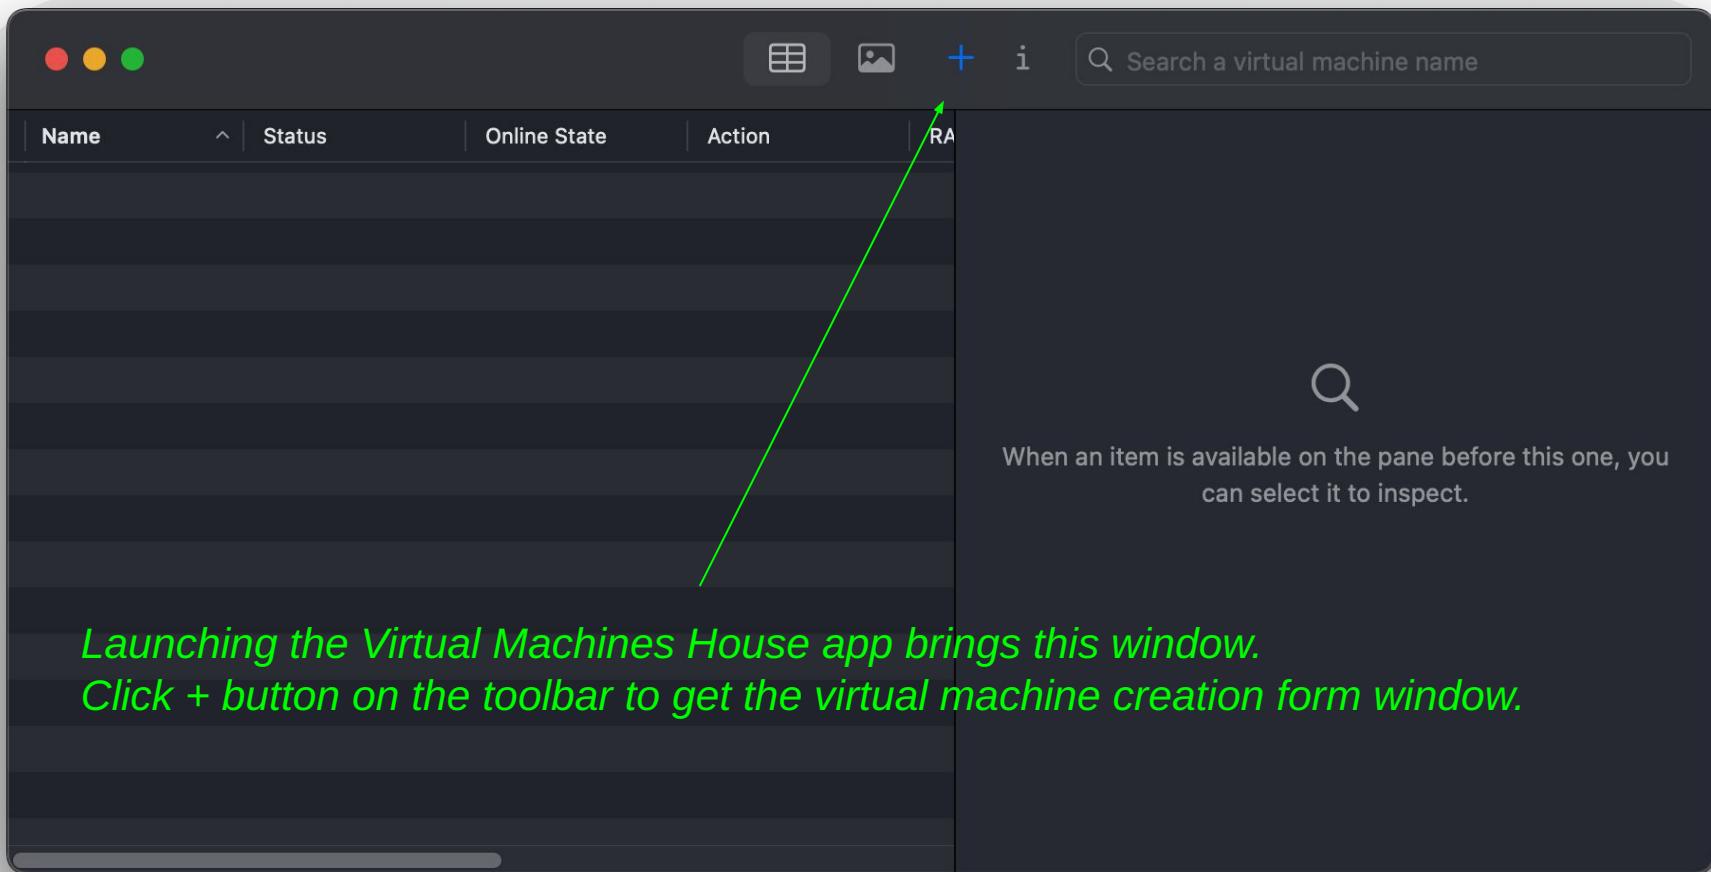

welcome

Continue

# Requirements

- Apple Silicon Mac system.
- macOS version 15 and above.
- Virtual Machines House app version 1.1 and above.
- Uninterrupted Internet with good speed (18 GB of macOS Tahoe image has to be downloaded.).
- Minimum 60 GB Free space of Disk (approximately 18 GB goes to macOS Tahoe image. Usually, twice the size of macOS image + some space is needed for normal operations).

*Launching the Virtual Machines House app brings this window.  
Click + button on the toolbar to get the virtual machine creation form window.*

Waiting for the macOS image...

61 MB / 17,03 GB

*Download of macOS restore image begins. Wait for download to complete. If this image was already downloaded, “Preparing for installation” view will appear.*

*Note: If the download is paused due to system idle timeout or network interrupt, the download can be resumed but sometimes the resumption is not 100% guaranteed. If the resumption is not perfect, the next installation step will fail. The downloaded image has to be deleted in the Settings of the app and then this virtual machine has to be deleted and then create a new virtual machine.*

● ○ ● t

Preparing for installing restore image

*Once the download is complete, this view appears. Wait for the next step.*
